

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A method for establishing a connection for a mobile node on a communication system having a home network for the mobile node and at least one foreign network comprising the steps of:

receiving a registration request message at a foreign network ~~AAA~~
Authentication, Authorization, Accounting server;

transmitting a request to a ~~AAA~~ Authentication, Authorization, Accounting
broker server to obtain service level agreement information to establish a secure
connection between the foreign and home networks; and[[,]]

receiving at the foreign network ~~AAA~~ Authentication, Authorization, Accounting
server a response transmitted from the ~~AAA~~ Authentication, Authorization, Accounting
broker server containing service level agreement information stored on the
Authentication, Authorization, Accounting broker server.

2. (Currently Amended) The method of establishing a home network connection in
Claim 1 further comprising the step of:

establishing a connection with a Authentication, Authorization, Accounting
server on the home network based upon the information received from the
Authentication, Authorization, Accounting broker server.

3. (Currently Amended) The method of establishing a home network connection in Claim 1 further comprising the step of:

receiving a response from the ~~AAA~~ Authentication, Authorization, Accounting broker server with a rejection response after the ~~AAA~~ Authentication, Authorization, Accounting broker server determines that the home network is not found by the ~~AAA~~ Authentication, Authorization, Accounting broker server.

4. (Currently Amended) The method of establishing a home network connection in Claim 1 where the response from the ~~AAA~~ Authentication, Authorization, Accounting broker server contains the ~~IP~~ Internet Protocol address of the home network to which the request should be directly forwarded.

5. (Currently Amended) The method of establishing a home network connection in Claim 4 wherein the response from the ~~AAA~~ Authentication, Authorization, Accounting broker server has multiple instances of a first value to indicate that different host networks can be contacted.

6. (Currently Amended) The method of establishing a home network connection in Claim 1 further comprising the step of:

transmitting the request to the ~~AAA~~ Authentication, Authorization, Accounting broker server for all messages to be addressed to unknown networks in order to identify the home network.

7. (Currently Amended) The method of establishing a home network connection in Claim 1 further comprising the step of:

receiving the response from the ~~AAA~~ Authentication, Authorization, Accounting broker server with a tag value that indicates the timeout value for a particular host.

8. (Currently Amended) The method of establishing a home network connection in Claim 1 further comprising the step of:

receiving the response from the ~~AAA~~ Authentication, Authorization, Accounting broker server with a session time-out value as a discretionary indication to the home network server on how long the home network entry should be maintained as valid on the foreign network.

9. (Currently Amended) The method of establishing a home network connection in Claim 1 further comprising the step of:

receiving the response from the ~~AAA~~ Authentication, Authorization, Accounting broker server with a tag value that indicates a host sever selection value.

10. (Currently Amended) The method of establishing a home network connection in Claim 1 further comprising the step of:

receiving the response from the ~~AAA~~ Authentication, Authorization, Accounting broker server with a certificate of the foreign network server and the host network server.

11. (Currently Amended) The method of establishing a home network connection in Claim 10 further comprising the step of:

receiving the response from the ~~AAA~~ Authentication, Authorization, Accounting broker server with a certificate encapsulated in an AVP Attribute Value Pair of the foreign network server and the host network server.

12. (Currently Amended) The method of establishing a home network connection in Claim 10 further comprising the step of:

receiving the response from the ~~AAA~~ Authentication, Authorization, Accounting broker server with a certificate of the foreign network server and the host network server where the foreign network server forwards the certificate in a communication to the home ~~AAA~~ Authentication, Authorization, Accounting server.

13. (Currently Amended) The method of establishing a home network connection in Claim ~~[[10]]~~ 1 further comprising the step of:

receiving the response from the ~~AAA~~ Authentication, Authorization, Accounting broker server with a certificate encapsulated in an AVP Attribute Value Pair of the foreign network server and the host network server.

14. (Currently Amended) The method of establishing a home network connection in Claim 1 further comprising the step of:

transmitting a request to a second ~~AAA~~ Authentication, Authorization, Accounting broker server in response to the response received by the foreign network server.

15. (Currently Amended) The method of establishing a home network connection in Claim 1 further comprising the step of:

receiving the response from the ~~AAA~~ Authentication, Authorization, Accounting broker server after the ~~AAA~~ Authentication, Authorization, Accounting broker server validates the request from the foreign network against information retained in the ~~AAA~~ Authentication, Authorization, Accounting broker server on allowed request clients.

16. (Currently Amended) The method of establishing a home network connection in Claim 1 further comprising the step of:

receiving the response from the ~~AAA~~ Authentication, Authorization, Accounting broker server after the ~~AAA~~ Authentication, Authorization, Accounting broker server validates the request from the foreign network by processing a destination attribute in an attempt to find a match on the home network.

17. (Currently Amended) The method of establishing a home network connection in Claim 1 further comprising the step of:

receiving the response from the ~~AAA~~ Authentication, Authorization, Accounting broker server after the ~~AAA~~ Authentication, Authorization, Accounting broker server validates the request from the foreign network by processing a user name attribute in an attempt to find a match on the home network.

18. (Currently Amended) The method of establishing a home network connection in Claim ~~[[1]]~~ 17 further comprising the step of:

receiving the response from the ~~AAA~~ Authentication, Authorization, Accounting broker server after the ~~AAA~~ Authentication, Authorization, Accounting broker server validates the request from the foreign network by processing a destination attribute in an attempt to find a match on the home network.

19. (Currently Amended) The method of establishing a home network connection in Claim 1 further comprising the step of:

contacting a second ~~AAA~~ Authentication, Authorization, Accounting broker server after a rejection response is received from the ~~AAA~~ Authentication, Authorization, Accounting broker server.

20. (Currently Amended) The method of establishing a home network connection in Claim 1 further comprising the step of:

after receiving the response from the ~~AAA~~ Authentication, Authorization, Accounting broker server that services the home network, the foreign network initiates a security association pursuant to the returned service level agreement information in the response message by transmitting a message to the home network from the foreign network.

21. (Currently Amended) The method of establishing a home network connection in Claim 1 further comprising the step of:

receiving a message from the home network server at the foreign network ~~AAA~~ Authentication, Authorization, Accounting server after the home network that services the home network ~~AAA~~ Authentication, Authorization, Accounting server processes a request from the foreign network server for a secure connection.

22. (Currently Amended) A system for establishing a home network connection of a mobile node on a foreign network in a wireless communications network comprising:

a home network having a home agent coupled to a home ~~AAA~~ Authentication, Authorization, Accounting server;

a foreign network having a foreign agent coupled to a foreign ~~AAA~~ Authentication, Authorization, Accounting server;

a mobile node transmitting a request to the foreign ~~AAA~~ Authentication, Authorization, Accounting server in a request to establish a secure connection between the mobile node and the home network; and[[,]]

an ~~AAA~~ Authentication, Authorization, Accounting broker server coupled to the foreign ~~AAA~~ Authentication, Authorization, Accounting server transmitting a request to the ~~AAA~~ Authentication, Authorization, Accounting broker server to determine the location of the home network and security association information for establishing [[a]] the secure connection between the mobile node and the home network according to a security protocol specified in the Authentication, Authorization, Accounting broker server.

23. (Currently Amended) The system set forth in Claim 22 wherein:

the foreign ~~AAA~~ Authentication, Authorization, Accounting server receives a response from the ~~AAA~~ Authentication, Authorization, Accounting server broker server that contain the IP Internet Protocol address of the home network to which the request should be directly forwarded.

24. (Currently Amended) The system set forth in Claim 22 wherein:

the foreign ~~AAA~~ Authentication, Authorization, Accounting server receives a response from the ~~AAA~~ Authentication, Authorization, Accounting broker server with multiple instances of a first value to indicate that different host networks can be contacted.

25. (Currently Amended) The system set forth in Claim 22 wherein:

the foreign ~~AAA~~ Authentication, Authorization, Accounting server transmits the request to the ~~AAA~~ Authentication, Authorization, Accounting broker server for all messages to be addressed to unknown networks in order to identify the home network.

26. (Currently Amended) The system set forth in Claim 22 wherein:

the foreign ~~AAA~~ Authentication, Authorization, Accounting server receives a response from the ~~AAA~~ Authentication, Authorization, Accounting broker server with a tag value that indicates a host server selection value.

27. (Currently Amended) The system set forth in Claim 22 wherein:

the foreign ~~AAA~~ Authentication, Authorization, Accounting server receives a response from the ~~AAA~~ Authentication, Authorization, Accounting broker server that includes a session time-out value as a discretionary indication to the foreign network server on how long the home network entry should be maintained as valid on the foreign network.

28. (Currently Amended) The system set forth in Claim 27 wherein:

the foreign ~~AAA~~ Authentication, Authorization, Accounting server receives the response from the ~~AAA~~ Authentication, Authorization, Accounting broker server with a tag value that indicates a host server selection value.

29. (Currently Amended) The system set forth in Claim 22 wherein:

the foreign ~~AAA~~ Authentication, Authorization, Accounting server receives the response from the ~~AAA~~ Authentication, Authorization, Accounting broker server with a certificate of the foreign network server and the host network server.

30. (Currently Amended) The system set forth in Claim 22 wherein:

the foreign ~~AAA~~ Authentication, Authorization, Accounting server receives the response from the ~~AAA~~ Authentication, Authorization, Accounting broker server with a certificate encapsulated in an AVP Attribute Value Pair of the foreign network server and the host network server.

31. (Currently Amended) The system set forth in Claim 22 wherein:

the foreign ~~AAA~~ Authentication, Authorization, Accounting server receives the response from the ~~AAA~~ Authentication, Authorization, Accounting broker server with a certificate that is forwarded to the home ~~AAA~~ Authentication, Authorization, Accounting server.

32. (Currently Amended) The system set forth in Claim ~~[[22]]~~ 31 wherein:

the foreign ~~AAA~~ Authentication, Authorization, Accounting server receives the response from the ~~AAA~~ Authentication, Authorization, Accounting broker server with a certificate encapsulated in an AVP Attribute Value Pair of the foreign network server and the host network server.

33. (Currently Amended) The system set forth in Claim 22 wherein:

the foreign ~~AAA~~ Authentication, Authorization, Accounting server transmits a second request to a second ~~AAA~~ Authentication, Authorization, Accounting broker server in response to a rejection response received from the ~~AAA~~ Authentication, Authorization, Accounting broker by the foreign network server.

34. (Currently Amended) The system set forth in Claim 22 wherein:

the foreign ~~AAA~~ Authentication, Authorization, Accounting server receives a response from the ~~AAA~~ Authentication, Authorization, Accounting broker server after the ~~AAA~~ Authentication, Authorization, Accounting broker validates the request from the foreign network against the information retained in the ~~AAA~~ Authentication, Authorization, Accounting broker server on the allowed request clients.

35. (Currently Amended) The system set forth in Claim 22 wherein:

the foreign ~~AAA~~ Authentication, Authorization, Accounting server receives a response from the ~~AAA~~ Authentication, Authorization, Accounting broker server after the ~~AAA~~ Authentication, Authorization, Accounting broker validates the request from the foreign network by processing a destination attribute in an attempt to find a match on the home network.

36. (Currently Amended) The system set forth in Claim 22 wherein:

the foreign ~~AAA~~ Authentication, Authorization, Accounting server receives a response from the ~~AAA~~ Authentication, Authorization, Accounting broker server after the ~~AAA~~ Authentication, Authorization, Accounting broker validates the request from the foreign network by processing a user name attribute in an attempt to find a match on the home network.

37. (Currently Amended) The system set forth in Claim [[22]] 36 wherein:

the foreign ~~AAA~~ Authentication, Authorization, Accounting server receives a response from the ~~AAA~~ Authentication, Authorization, Accounting broker server after the ~~AAA~~ Authentication, Authorization, Accounting broker validates the request from the foreign network by processing a destination attribute in an attempt to find a match on the home network.

38. (Currently Amended) The system set forth in Claim 22 wherein:

the foreign ~~AAA~~ Authentication, Authorization, Accounting server receives a rejection response from the ~~AAA~~ Authentication, Authorization, Accounting broker server after the ~~AAA~~ Authentication, Authorization, Accounting broker server determines that the home network is not found serviced by the ~~AAA~~ Authentication, Authorization, Accounting broker server.

39. (Currently Amended) The system set forth in Claim 22 wherein:

the foreign ~~AAA~~ Authentication, Authorization, Accounting server contacts a second ~~AAA~~ Authentication, Authorization, Accounting broker server after a rejection response is received from the ~~AAA~~ Authentication, Authorization, Accounting broker server.

40. (Currently Amended) The system set forth in Claim 22 wherein:

the foreign ~~AAA~~ Authentication, Authorization, Accounting server initiates a security association pursuant to the returned information in the response message by transmitting a message to the home network from the foreign network.

41. (Currently Amended) The system set forth in Claim 22 wherein:

the foreign ~~AAA~~ Authentication, Authorization, Accounting server receives a message from the home network server to the foreign network server after home network server processes the request from the foreign network server for a secure connection.

42. (Currently Amended) A method for establishing a connection for a mobile node on a communication system having a home network for the mobile node and at least one foreign network comprising the steps of:

receiving a registration request message at a foreign AAA Authentication, Authorization, Accounting server;

transmitting a request to a AAA Authentication, Authorization, Accounting broker server to obtain service level agreement information to establish a secure connection between the foreign and home network; [[and,]]

receiving at the foreign network AAA Authentication, Authorization, Accounting server a response from the AAA Authentication, Authorization, Accounting broker server containing service level agreement information[[,]]; and

establishing a secure connection with an AAA Authentication, Authorization, Accounting server on the home network based upon the service level agreement information received from the AAA Authentication, Authorization, Accounting broker server to encrypt information packets transmitted between the home network and the mobile node.
